

Water Security Agency
Water and Wastewater Operator
Certification Program

**Continuing Education Unit Evaluation and Credit** 

# Saskatchewan Water Security Agency Water and Wastewater Operator Certification Program

#### **Guidelines for Continuing Education Unit and Course Evaluation**

#### **Background**

Certification is based on *The Environmental Management and Protection Act, 2010* (EMPA) that was enacted on June 1, 2015. Section 98(1) Items (u) to (y) of this Act provides, in part, that the Lieutenant Governor in Council may make regulations respecting training and qualification of operators of the waterworks and sewage works. The Waterworks and Sewage Works Regulations, states in Section 62 that all owners of a municipal waterworks or wastewater works **are required** to ensure the responsibility for the overall day-to-day operation of the works be placed with an operator(s) holding the appropriate certificate(s).

The Environmental and Municipal Management Division of the Water Security Agency (WSA) administers the Water and Wastewater Operators Certification Program for the province. The WSA is a member of the Association of Boards of Certification (ABC), and follow their model for certifying Water and Wastewater Operators.

One of the requirements for higher levels of certification is formal post-secondary education. A need for a Continuing Education Unit (CEU) to enable operators, without post-secondary education, to achieve an equivalent education level was needed. The CEU system in use by the WSA is recognized and adopted from the ABC model and the International Association for Continuing Education and Training (IACET).

#### The Continuing Education Unit (CEU)

By definition, one Continuing Education Unit equals ten contact hours of participation in organized continuing education/training experience under responsible, qualified direction and instruction as approved by the certification authority.

Forty-five (45) CEU is equivalent to 1 grade of high school level achievement or 1 year of post-secondary education.

Course relevance is determined on a case-by case- basis by the WSA Operator Certification Program. Some exceptions are given to courses reviewed by other certification authorities such as AWWA, ABC, Manitoba Water and Wastewater Facility Operators Certification Program, Alberta Environment Water and Wastewater Operator Certification Advisory Committee, etc.

#### **Post-Secondary Education**

The Saskatchewan Water and Wastewater Works operator Certification Standards, 2012, require either 2 years of post-secondary education for Level III certification or 4 years of post-secondary education for Level IV certification. Substitutions of applicable approved experience or CEU are permitted.

Post-secondary education is defined as a one, two, three or four year program at a recognized institution that results in a diploma, certificate or degree. The program must be shown to be relevant to the water and wastewater operations industry. This means that it must be science/math based rather than arts/humanities based.

Course relevance and partial degrees, diplomas or certificates is determined on a case-by case- basis by the WSA Operator Certification Program. The maximum post-secondary education credit that can be applied to the certification program is four years.

#### **Educational Course Assessment for the Operator Certification Program**

#### **Equivalent Time Calculation**

For the purpose of calculating time allocation, one year of post high school is equal to 30 credit hours of university courses based on five classes each of three credit hours per semester over two semesters; 1,200

hours of course content from a technical school; 45 CEU's of training in an appropriate field; or completion of a full year of course content in an appropriate field of study as defined below.

#### **Appropriate Field of Studies - Completed Degrees and Diplomas**

For the purpose of completed degrees and diplomas a DACUM will be used to assess the acceptability of the program. The DACUM establishes the minimum course content requirements to meet the training needs of an operator. The DACUM for water and wastewater operators requires that any degree or diploma include the minimum of:

- courses in mathematics or physics;
- courses in environmental studies, water/wastewater or related fields; courses in a natural science (Biology, Chemistry); and
- courses in administration or management.

In general, the following areas of study are appropriate as post-secondary educational fields:

- a Bachelor Degree in Science, Medicine or Engineering resulting in a B.Sc, B.A.Sc or B. Eng. This
  includes Agriculture, Biology, Laboratory Studies and Chemistry degrees; and
- a diploma in the field of Applied Science and Technology, Laboratory Studies, Medical Studies or Engineering Technology.

If a degree or diploma does not meet the minimum DACUM requirements, the applicant will be advised of the missing component(s) and be required to supplement their education by attending CEU accredited courses or by other educational means. The Certification Board will review and assess non-traditional educational programs not addressed by this policy as required. The assessment will be based on a common understanding of educational requirements needed for an operator to perform their duties.

#### **Education and Training**

Education and training can be broken into several separate categories:

- 1. High school diploma, high school equivalency diploma or GED, as well as "Adult Upgrading" are NOT eligible for CEU assignment.
- 2. Formal post-secondary programs (certificate, diploma, degree)
- 3. Formal related water and wastewater training on specific topics or for preparation for certification exams eligible for CEU assignment.
- 4. On-the-job training is NOT eligible for CEU assignment.
- 5. In-house training MAY be approved for CEU
- 6. Continuing education courses or events that do qualify for CEU.

#### **Courses Considered for CEU**

Any course that meets the definition of CEU, and that can be referenced to a recognized need-to-know, will be assigned CEU. This includes classroom courses, seminars, conferences or workshops. It also includes courses that are offered by correspondence or on-line. CEU for correspondence or on-line courses will be determined by assessing the amount of time it would take to deliver the material if it were to be delivered in a classroom setting, not the amount of time it actually takes to complete.

The following is a partial list of trainings/courses that are recognized by the Certification Program. If you have taken training that is not listed here and you think that it is relevant, you may submit a course outline/description to the Certification Coordinator for review. The list will be updated regularly as new courses are submitted for assessment.

#### **CEU Listing**

The Water Security Agency will be maintaining a list of courses that have been assigned CEU's. The list will be divided into two parts, the first will list those courses that are continuously available or are available on a regular basis and the second will be those courses that were on-time offerings and are no longer available.

CEU's will not be given for duplicate training. (i.e. an operator will not receive CEU credit for repeating the same course).

If you have taken training and it is not listed on the approved list, and you think it is relevant, you may submit a CEU Evaluation Form to the Operator Certification Board. The form can be found at <a href="https://saskocb.ca/wp-content/uploads/CEU-Evaluation-Form-June-10-2020.pdf">https://saskocb.ca/wp-content/uploads/CEU-Evaluation-Form-June-10-2020.pdf</a>

The available training listed may or may not be current. Please contact the training provider directly for more information on specific courses.

Distributions System Breaks and Repairs	WD-04-HO	0.6
Distribution System Pipe Assemblies	WD-06-HO	1.3
Emerging Issues: Lead Services (Get the Lead Out!)	WD-62-CT	0.6
Fundamentals of Water Distribution for New Operators	WD-44-HO	3.0
Flushing Techniques	WD-03-HO	0.6
Hydrostatic Pressure Testing of Watermains	WD-58-HO	0.6
Introductory Math	WD-22-CT	0.6
Maintaining Chlorine Residual and Proper Sampling Techniques	WD-24-CT	0.6
Operation and maintenance of Fire Hydrants	WD-02-CT	1.2
Tapping of Watermains	WD-01-HO	0.6
Watermain Disinfection	WD-51-CT	0,6
Exam Preparation Level 1 & 2 Water Distribution	WD-54-CT	3.0
Exam Preparation Level 2 & 3 Water Distribution	WD-55-CT	3.0
Wastewater Treatment		
Activated Sludge Control	WWT-05-CT	1.8
Bio-Solids Handling	WWT-03-CT	0.6
Basic Wastewater Treatment	WWT-02-CT	1.8
Calculations In Wastewater Technology	WWT-14-CT	0.6
Exam Preparation OIT, Wastewater Treatment and Collection	WWT-06-CT	3.0
Exam Preparation Wastewater Treatment Level 1 & 2	WWT-07-CT	3.0
Exam Preparation Wastewater Treatment Level 3 & 4	WWT-08-CT	3.0
Fixed Film and Other Treatment Processes	WWT-13-CT	0.6
Micro Organisms	WWT- 09-CT	0.6
Ponds and Lagoons	WWT-11-CT	0.6
Wastewater Digester Operation and Control	WWT-12-CT	0.6
Wastewater Problem Solving	WWT-10-CT	0.6
Basic Wastewater Collection for Treatment Plant Operators	WWT-20-CT	0.6
Wastewater Collection		
Exam Preparation Wastewater Collection Class 1 & 2	WWC-01-CT	2.4
Exam Preparation Wastewater Collection Class 3 & 4	WWC-02-CT	2.4
Basic Wastewater Collection	WWC-07-CT	1.8
Collection System Odour and Corrosion Control	WWC-09-CT	0.6
Lift Station Operation and Maintenance	WWC-10-CT	0.6
